

Oolite "Krait"

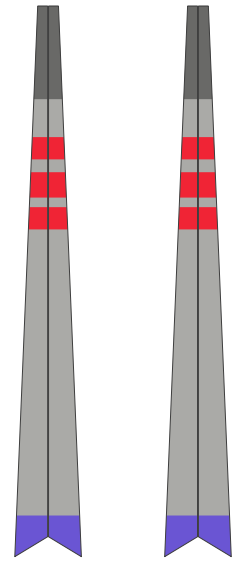

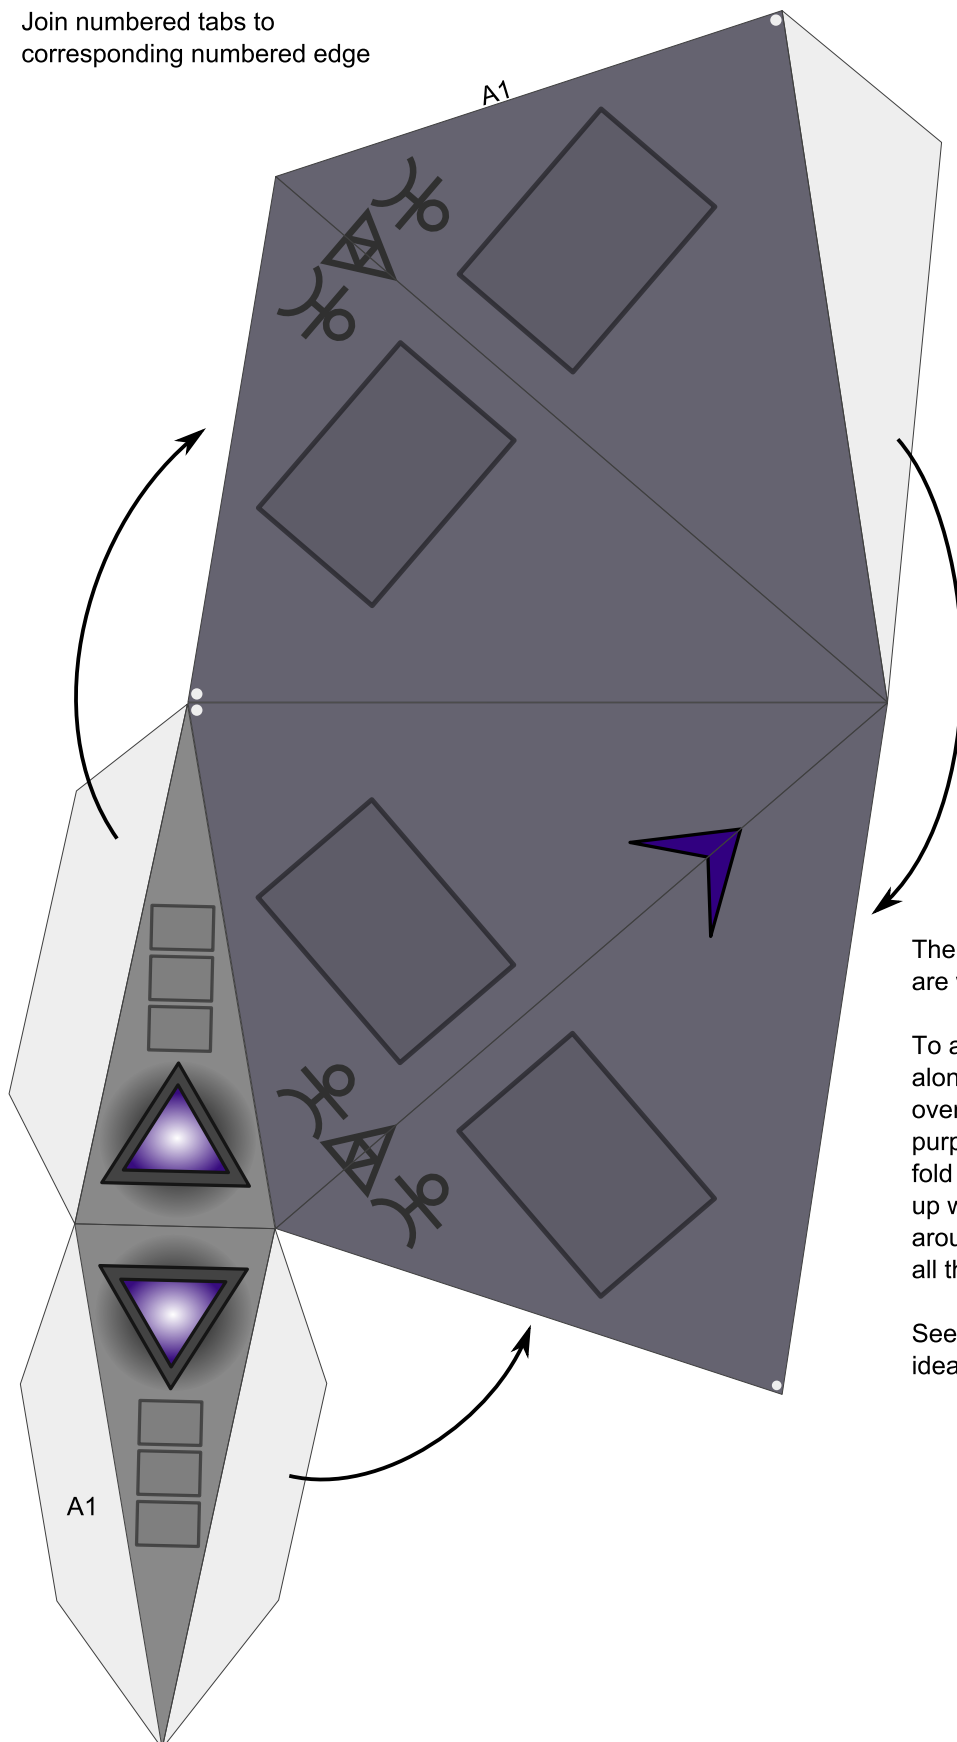

Model Design by Ian Bell and David Braben

Texture by Giles "Aegidian" Williams

Paper Model Mesh by Dave "Selezen" Hughes

All folds are Mountain folds.

Join numbered tabs to
corresponding numbered edge

The little white circles at the corners
are where the "spikes" are glued.

To assemble the spike, score and fold
along the centreline and apply glue all
over one inner surface. Align the
purple/blue end to the white circle with
fold to the outside of the model, lined
up with the edge. Fold the other edge
around and glue it to the other side
all the way to the tip of the spike.

See the diagram below for a rough
idea of what I mean.
